

# ***Fundamentals of GIS***

## ***Geographic Information System***

***December 8, 2000***

***Ed Gorny***

***Nancy Gorny***

# ***History of Mapping***

***Historically, maps have been used for:***

- ***navigating through unfamiliar lands and waters***
- ***communicating information about relative locations of objects such as cities, countries and oceans***

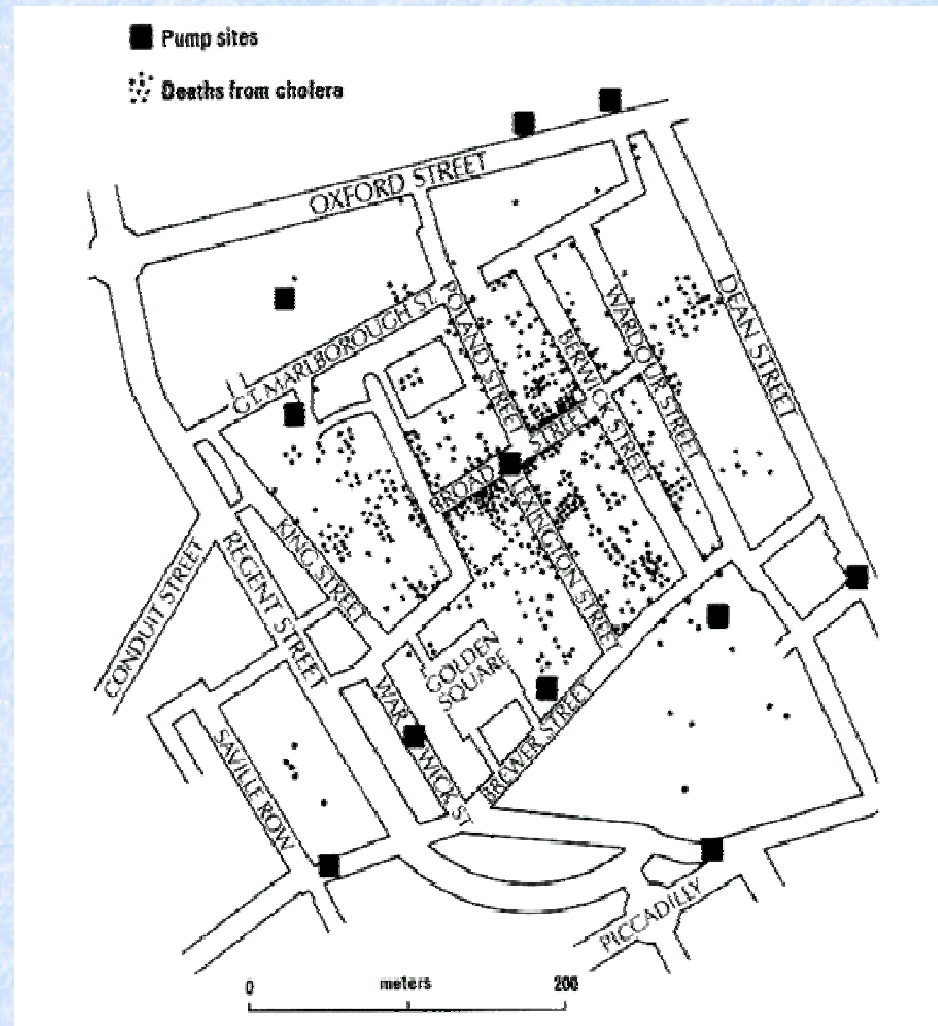

## ***Early Use of Theme Maps Included:***

- ***Maps of the Battle of Yorktown drawn by the French Cartographer Louis-Alexandre Berthier contained hinged overlays to show troop movements. (American Revolution)***
- ***The mid-19th Century "Atlas to Accompany the Second Report of the Irish Railway Commissioners" showed population, traffic flow, geology and topography superimposed on the same base map.***

# ***Early Use of Theme Maps Included:***

***Dr. John Snow used a map showing the location of death by cholera in central London in 1854 to track the source of the outbreak to a contaminated well.***

# *GIS Sprang out of Cartography*

- *Cartography became important in modern society for war-time mapping.*
- *New data sets became available from aerial photography missions.*
- *Earliest GIS developed in the 1960s.*
- *A need develops to analyze data that was being collected for statistical studies.*

# *What is GIS?*

- ① *GIS is a “Geographic Information System”.*
- ② *GIS is a system designed for storing, updating, analyzing, displaying, and manipulating spatial data - information about places on the planet.*
- ③ *GIS uses the power of the computer to answer questions by arranging and displaying all kinds of data about places in a variety of ways such as maps, tables and charts.*

# ***That Almost Sounds Scary!***

- ***Think of GIS centering around maps.***
- ***Maps can be powerful tools to make decisions, find objects, and discover trends, events and other spatial relations beyond individual locations of information.***
- ***GIS is a new trend in geographic decision making that consists of maps, databases, query and analytical relations.***

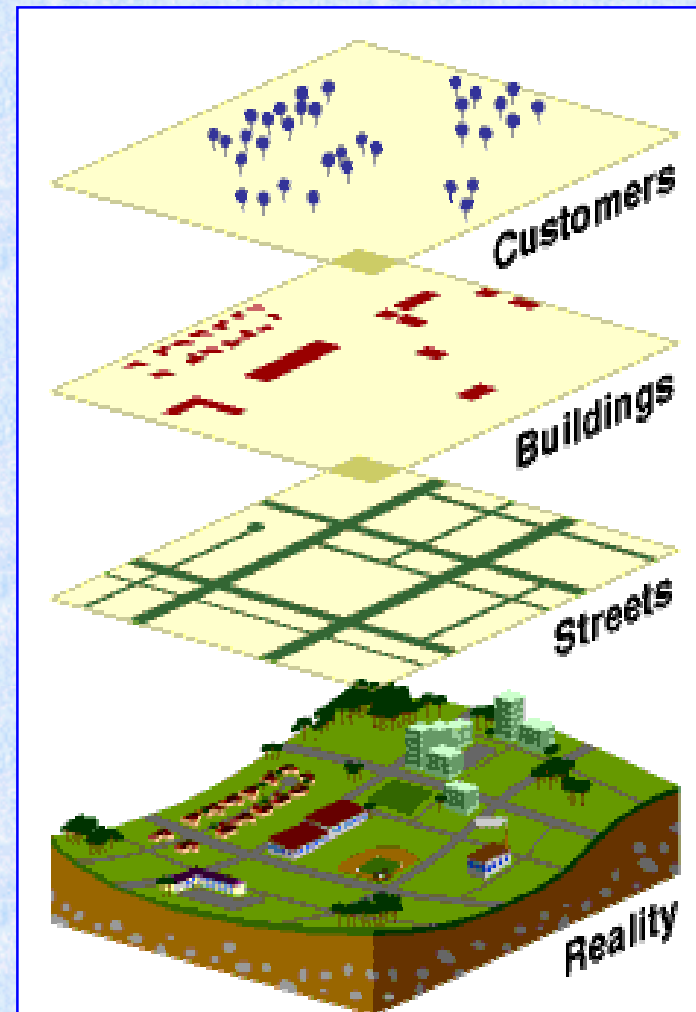

# ***What Makes Up GIS?***

- ***GIS is a mixture of information about the real world (layers or themes):***
  - ***population and political boundaries***
  - ***interstates, highways and local roads***
  - ***rivers, elevation and other physical features***
  - ***any other data you can think of and collect***
- ***Another main components is YOU, the Intelligent Thinker!***

# *How Does GIS Work?*

- *Data and Information is stored as a collection of thematic layers*
- *Think of GIS as a sandwich that YOU put together*

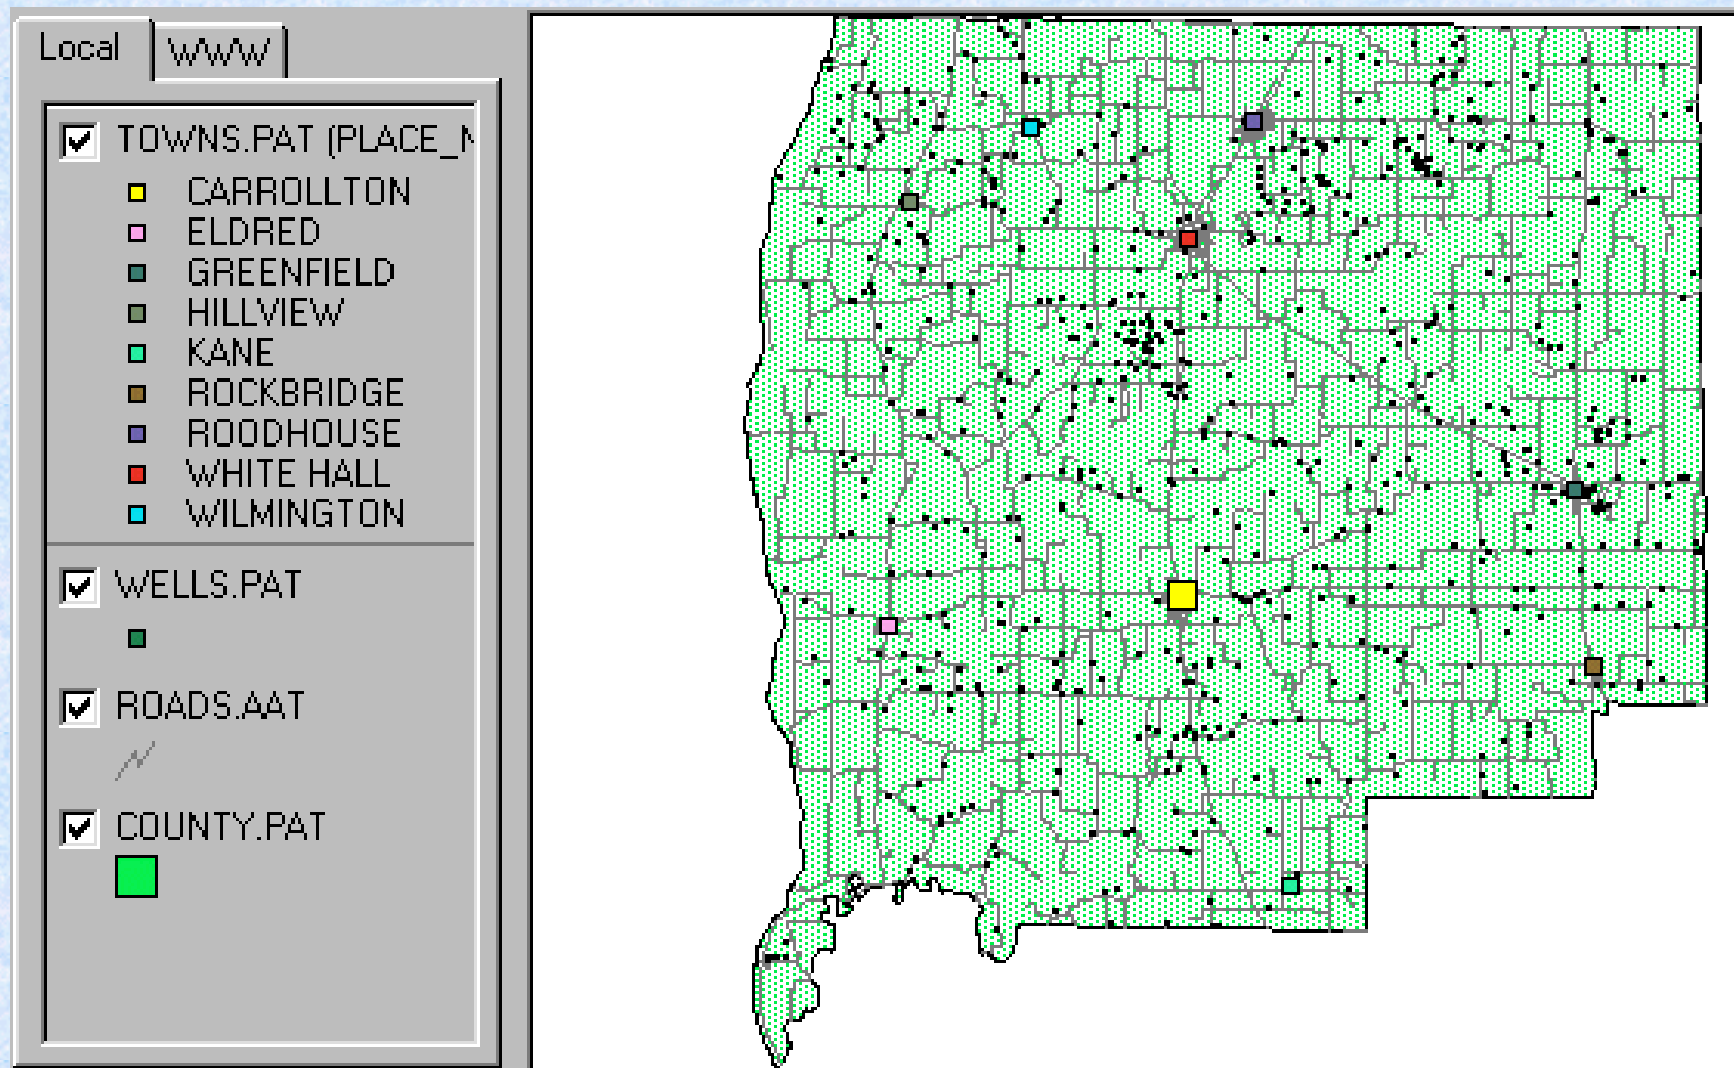

# ***What are the Main Layers of GIS?***

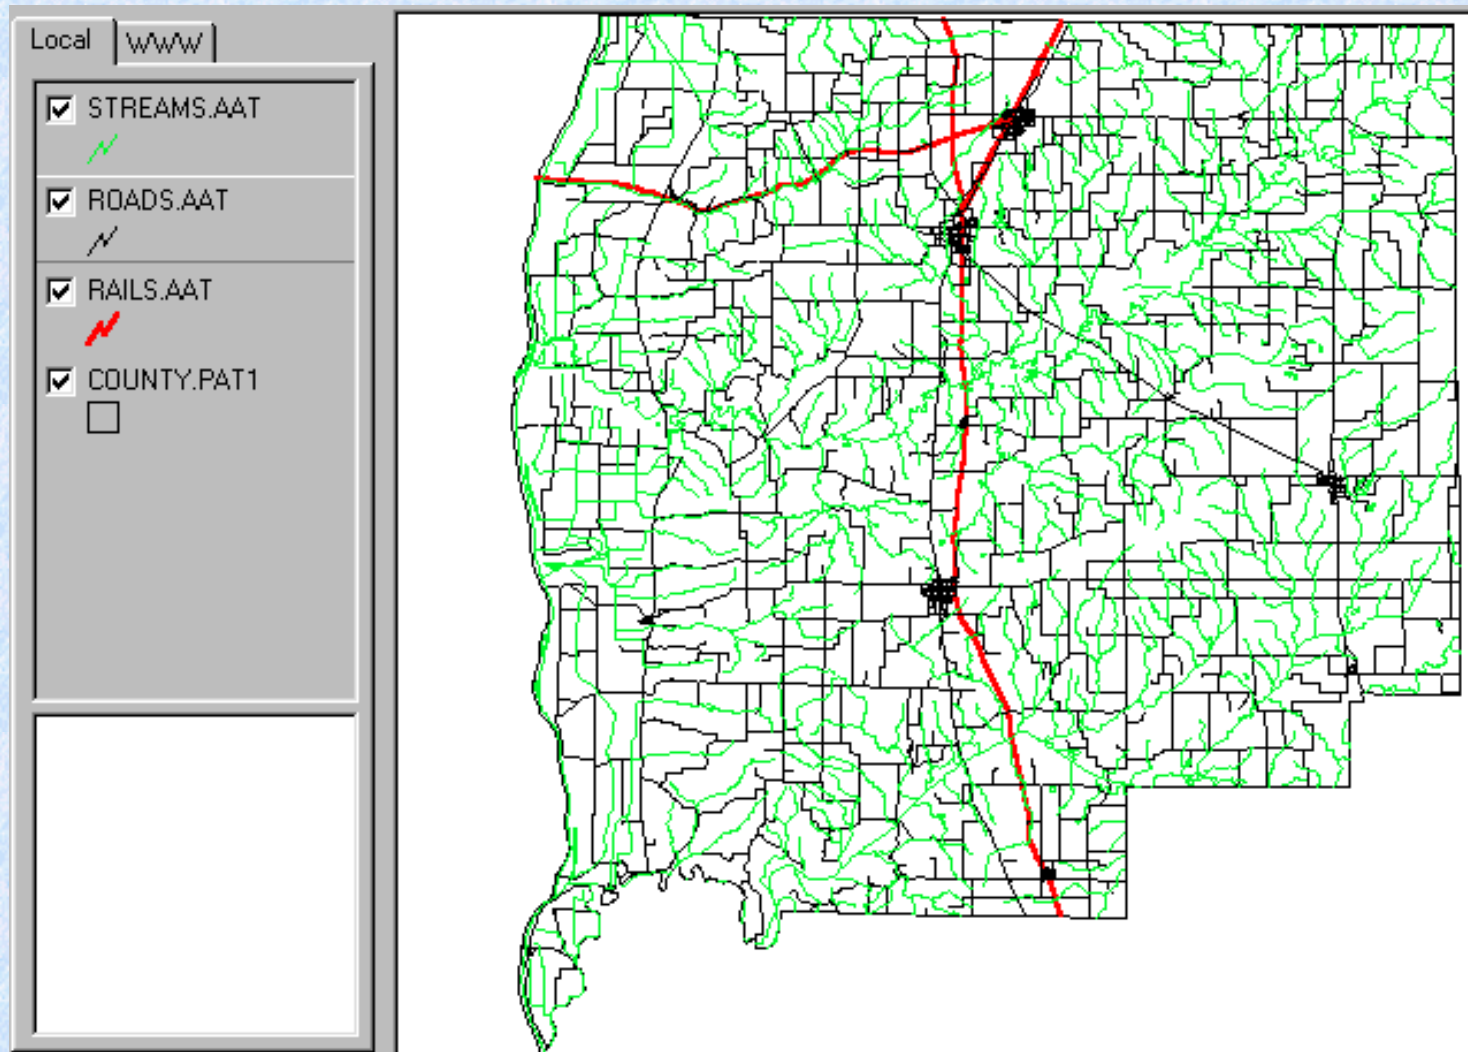

- ***Points***
  - ***towns, cities, state capitals***
  - ***trees, fire hydrants, stop lights***
- ***Lines***
  - ***highways, rivers, fault lines***
  - ***boundaries, railroads, utilities***
- ***Areas***
  - ***states, forests, mountain ranges, lakes***
  - ***land use, school districts, soil types***

# *Examples of Points*

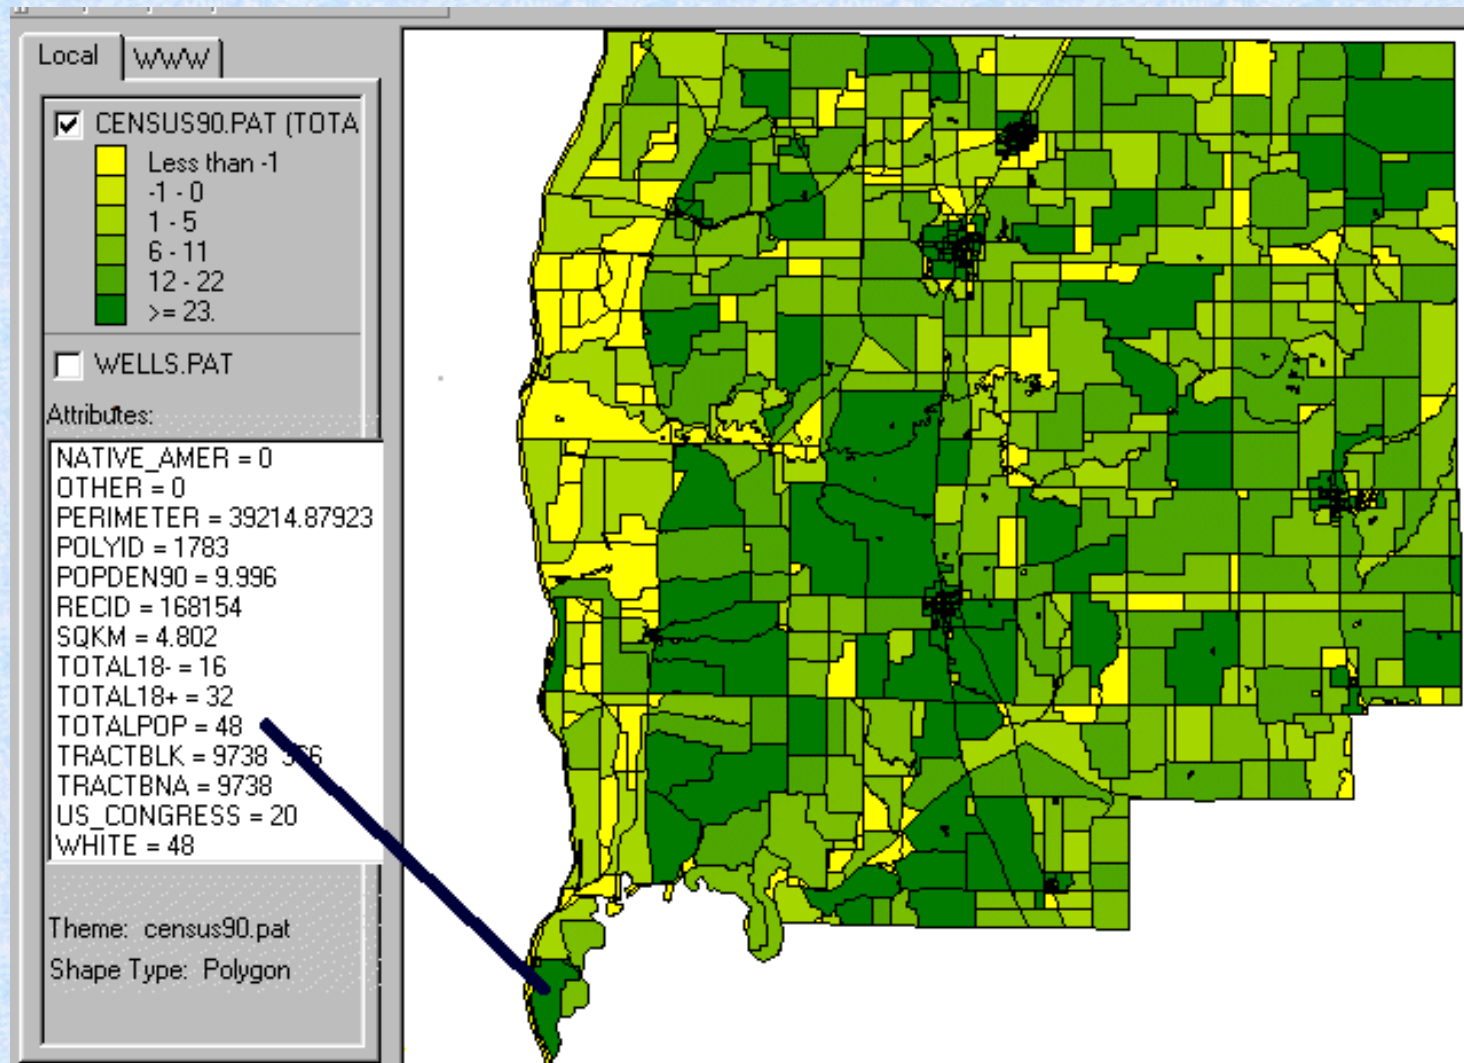

# *Examples of Lines*

# *Examples of Areas*

# ***GIS Integrates All the Parts... to See the Whole!***

# ***What are the Components of GIS?***

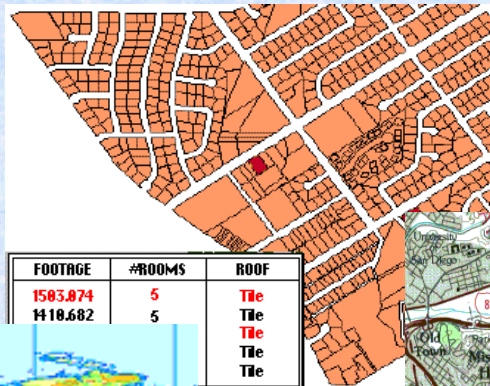

- ***Hardware***
- ***Software***
- ***Data Collection***
- ***Methods of Analysis***
- ***People - Thinkers***

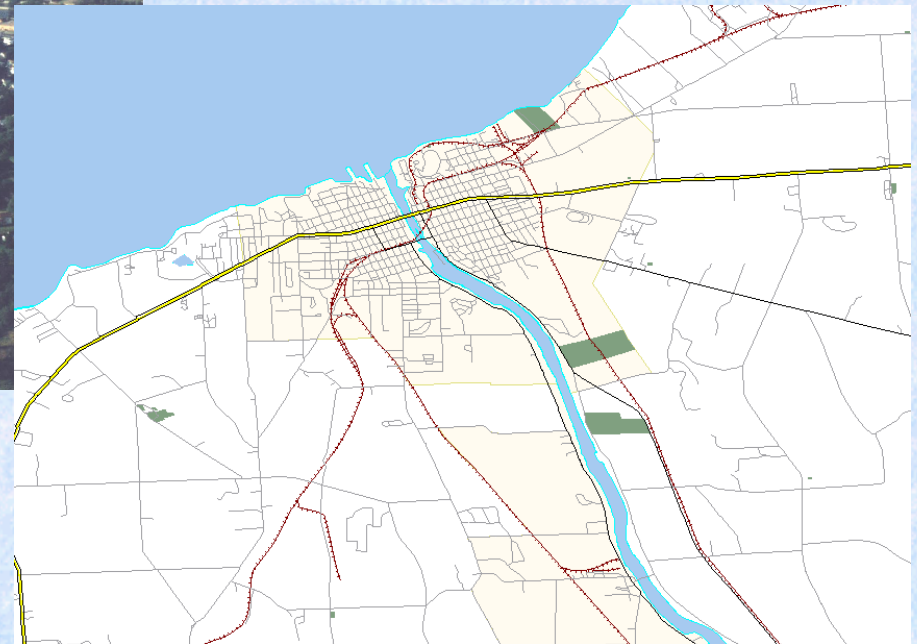

# *Maps of GIS*

## *Come in many flavors!*

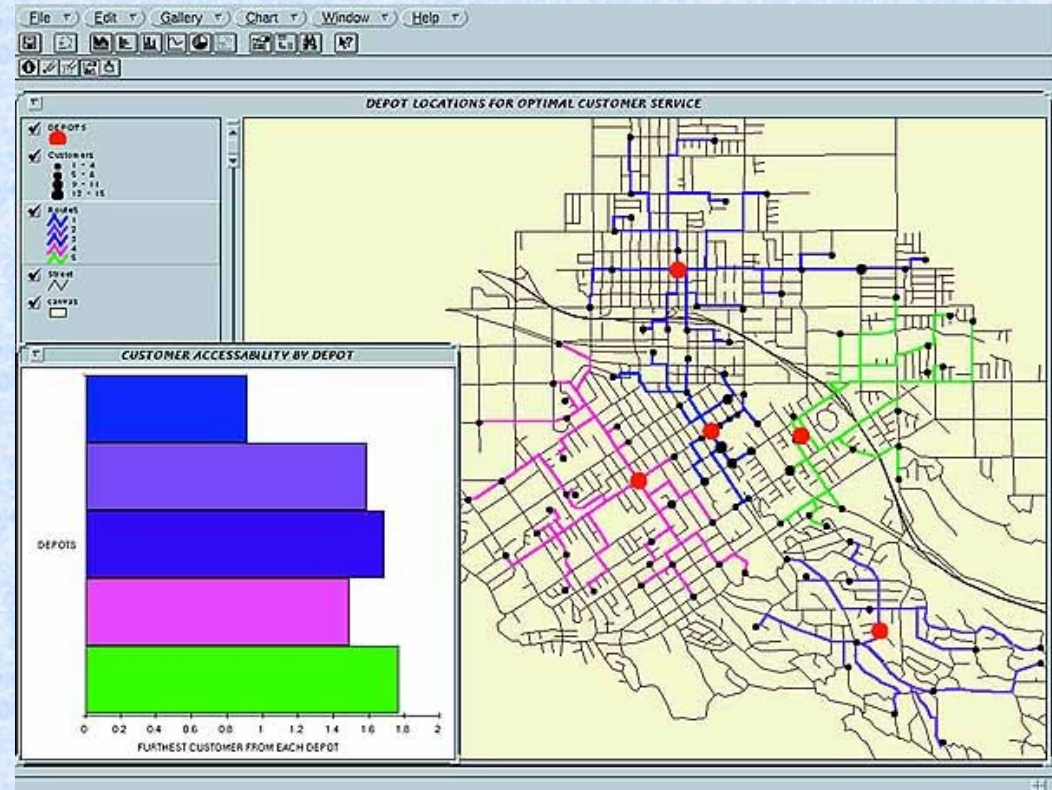

# *Maps are graphic representations of the real world*

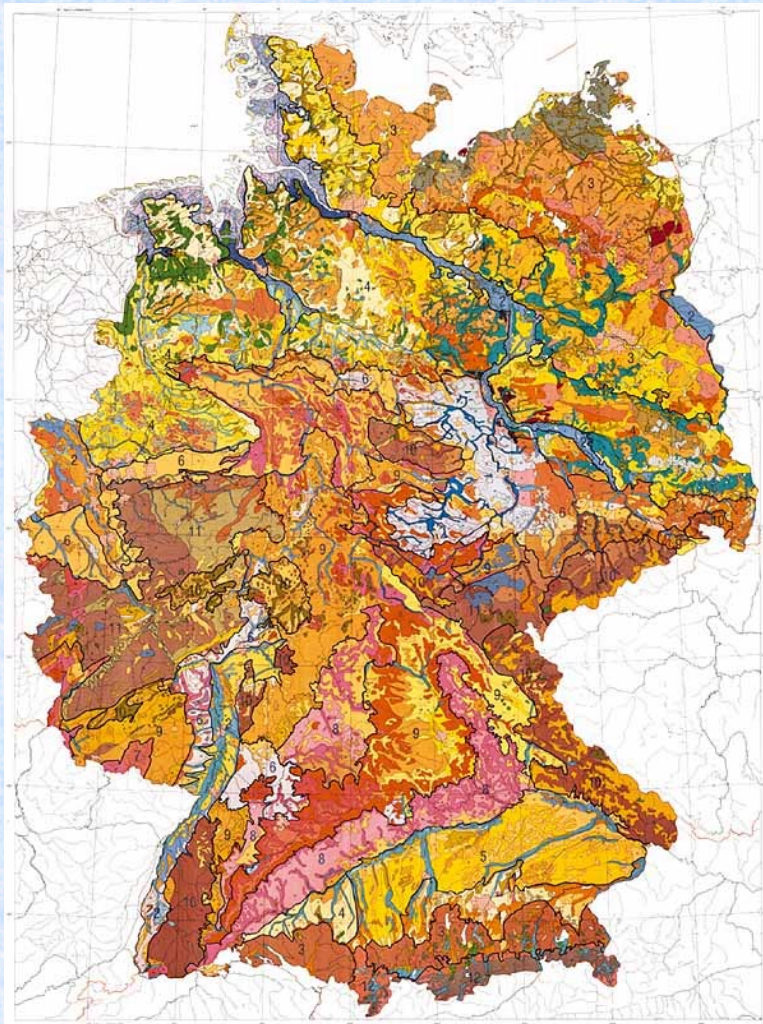

# *Query: City Maps in your neighborhood*

*What are the best routes for your school buses in order to get everyone home the fastest?*

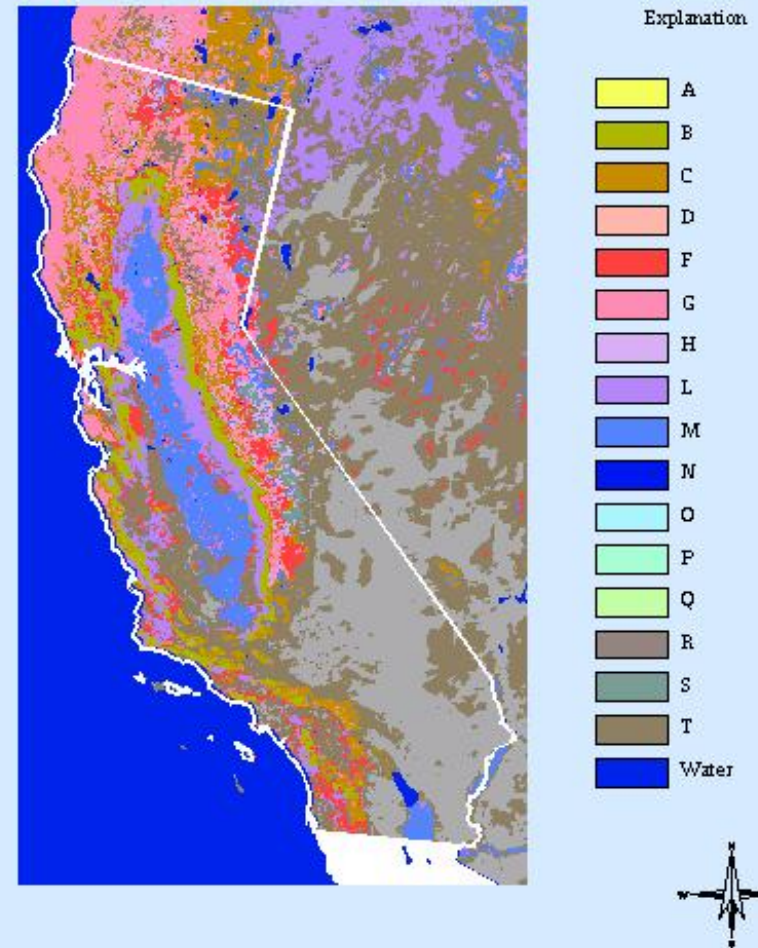

# *Environmental maps...*

# ***What Can a GIS Do for You?***

- ***Perform Geographic Queries and Analyses***
- ***Map, Model, and Analysis Data***
- ***Make Better Decisions and Create Better Solutions***

# ***But Why?***

- ***GIS Is about finding patterns.***
- ***Lots of data is coming from different sources. You will want to consider all of it to make better decisions.***
- ***Answer the questions of location such as where, why, and how.***
- ***Solve problems and make decisions.***
- ***See patterns and trends that spreadsheets and charts alone won't portray.***

# ***What Does GIS Really Mean?***

## ***Something to think about!***

### **① Geographic Information Systems**

- Using the Tools of GIS to solve a problem?*

### **② Geographic Information Science**

- Studying the theory and concepts behind GIS?*

### **③ Geographic Information Studies**

- Studying the social context of geographic information?*

***“The application of GIS is  
limited only by the imagination  
of those who use it”***

***Jack Dangermond***

# *One Major Problem with GIS!*

- *As you will discover, GIS is a very powerful tool. However, there is one thing NO GIS system can do.*
- *Any idea???*

*Well it can't figure out how to fold up that paper map.*

***Some of the pictures viewed in this presentation  
have come from public web sites. Thanks to all for  
the time and effort put forth in their creation....***
